CEDIA Expo 2008, Stand A12/A14

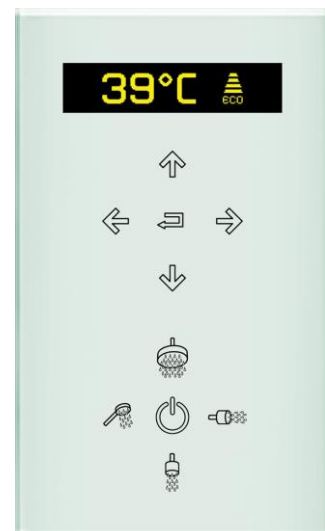

Triple technology breakthrough for bathrooms

Visitors to this year's CEDIA Expo should be sure to check out stands A12 and A14 for a technical and visual treat from Unique Automation.

The forward-thinking company that brought full automation to the bathroom is delighted to announce the introduction of exciting new products at this year's show. bathomatic shower control, bathovision, and steamomatic are designed to complement the company's flagship product bathomatic – the revolutionary bath management system.

All Unique Automation products interface with AMX, Crestron and other automation systems via RS232 or TCP/IP as well as having local, glass touch-screen fascias.

An all-glass shower, made by stand partners Barretts Glass, will be the centrepiece of the stand, showcasing the bathomatic shower control and the new bathovision tablet. The bathomatic shower control will incorporate pre-sets to enable users to select and store their ideal shower temperature and flow-rate. The minimal glass user interface will display temperature and volume plus an eco setting which reduce flow-rate by 25%.

The waterproof, flat widescreen bathovision TV offers the ultimate in pampering. Heated, mirrored glass combats condensation, making it perfect for high humidity areas such as bathrooms, wet rooms, kitchens or even

poolsides, whilst a remote control offers user-flexibility.

batho**vision** is a bathroom TV with a difference. In addition to all expected features for a HD ready product it will also be an interactive control interface for other Unique Automation products including batho**matic**, using through-glass touch sensing and a frameless mirror finish. Screen sizes range from 23” – 46”.

Also new at CEDIA is steamo**matic**, offering a luxurious addition to individual bathrooms or customised shower cubicles. With its therapeutic benefits, steam is now often in demand in bathrooms and home spas.

A compact 3kW steam generator is combined with a glass touch-control panel. The steam generator measures just 210 x 275 x 106 mm and can easily be installed under a seat. Features include: fully automatic de-scaling to flush the system clean after each use, full thermal insulation, ease of servicing, and quick and simple installation.

Visitors will also be able to see batho**matic** freestanding, which offers integrators “all in one box” solutions for all batho**matic** models - batho**matic** basic and batho**matic** ultimate. This product is specifically designed for installation on freestanding bath tubs, but as it simplifies installation it is likely to prove popular for all installations.
