14-17 October 2009, Alexandra Palace, London

Unique Automation 'in touch' with iPhone

In the fast-paced world of consumer technology, Unique Automation is demonstrating its expertise as a forward thinking innovator.

An exciting development from this London-based high tech bathroom electronics company is a family of iPhone [software](#)—applications that allow control of their **bathovision® TV**, **bathomatic®** and **iShower®** products.

bathomatic®, the world's first and only fully automated bath management system, lowers the motorised bath plug, fills the tub to a predetermined depth and temperature and even adds perfumes on request. It can be operated via a wall-mounted control panel, PC, home automation or building management systems. The [bathomatic®](#) application is available via the Apple app store free of charge. Once downloaded and installed, the software enables users to operate any **bathomatic®**.

bathovision® is a frameless, flat screen, digital television designed for use in bathrooms or any other places where high humidity/steam or water exists. When ON the screen is heated to stop condensation from forming, displaying a high quality wide screen picture, when OFF it looks like a stylish, frameless mirror. In addition to the iPhone **bathovision®** can be controlled by home automation systems or a computer via RS232C or Ethernet.

The [Remote™](#) application is available via the Apple app store free of charge. Once downloaded and installed, the software enables users to operate any **bathovision®**

TV on the Local Area Network¹ (LAN). From the on-screen display menu of **bathovision®** ~~using the~~ iPhone users can command **bathomatic®** to fill a bath to perfection while flicking through the channels or, when in the bath, ~~to~~ dim the room lights. Further functionality extends to **bathomatic®** set up and diagnostics. The new software enables the iPhone to become the **bathovision®** remote control, allowing the user to operate the TV by touch even from outside the bathroom.

iShower® - Utilising ~~cutting-leading~~ edge technology it controls up to twelve water falls, shower heads, hand showers ~~and/or~~ body jets. A true waterworks or spa experience can be built into any bathroom without compromising on aesthetics ~~and/or~~ performance. The temperature and flow at each outlet ~~are-is~~ individually controlled unlike any other shower system ~~in-the-world~~currently available, allowing for the unparalleled configuration of personal presets and experiences. The **iShower®** application is available via the Apple app store. Once downloaded and installed, the software enables users to operate any

iShower®.

For further information visit www.bathomatic.com or telephone 020 7740 3910

Software Requirements

Compatible with iPhone or iPod touch

Requires iPhone 2.2.1 Software Update

Requires **bathomatic®**, **bathovision®** and **iShower®** hardwired to a network with WiFi
