

## **Unique Automation continues to surprise with full bath automation and simplicity**

The world's first luxury bathroom automation company, Unique Automation is proud to announce the unveiling of its new and most basic interface to its unique and most advance bath management system in the world bathomatic.

The new control is a device resembling a typical waste/filler kit, but made form solid brass, hand polished to perfection and plated in range of metal finishes from chrome and nickel to solid gold and RAL colours. It is suitable for installation to any bath with standard overflow hole and works with all bathomatic models. Custom variations are available on request.

The operation could not be simpler it works like MP3 or DVD player with three states, empty, pause and fill. When the lever is in extreme left position the bath plug is open and any water drains. Turn the plug to extreme right position and the bath fills to a preset depth and temperature<sup>1</sup>. At any time during filling or emptying the bath you can

put the lever in mid position and the plug goes down awaiting further instruction. As part of the bathomatic intelligence if there is water in the bath and you turn right to fill bathomatic delivers the preset accounting for the water found in the bath compensation for any temperature loss and delivering perfect depth without overflowing.

This most basic user interface, which is part of bathomatic's motorised waste kit, is opening the door for bathomatic into the most simplicity demanding of environments liken the hospitality and care sector. We plan to develop bundles of bathomatic, which are stripped of luxury options and still offer most of the environmental advantages and price them at a lower price point in a bid to get endorsement by environmental schemes and insurance companies.
