3D Touch - a “must” in any three dimensional world

Years of intense R&D produced the world’s first 3D touch user interface. Unique Automation has not only given touch sensing another dimension, but made it completely waterproof. iShower® 3D and bathomatic® 3D will debut ISE 2013 (stand 5-U100)

No larger than a hockey puck, iShower® 3D controls up to 4 outlets with precision and has a total output of 100 litres per minute. Individual flow and temperature control is applied to each outlet when needed. The device can store up to 15 presets and it is as simple to install as a postage stamp¹. It is completely waterproof and of a solid, glass construction carrying a LIFE TIME WARRANTY².

¹ Sticks to the wall without the need of a back box

² Conditions apply

The 3D touch works similarly to the turning of an amplifier knob with the difference that nothing moves apart from your fingers. You slide up to five fingers around the edge of the interface clockwise or counter clockwise for control of temperature/flow as well as other parameters.

bathomatic® 3D

WoW Switch™ 3D - available June 2013

WoW Switch™ 3D features horizontal and vertical swipes as well as having a light and temperature sensor on board. The initial offering will be on RS485 and strictly via selected Custom Installers. Custom Installers interested in the product please register your interest now.
